Let's Draw is a drawing game where you can draw whatever you want or you can draw over one of three templates.

I've explained the whole game in one sentence; that's all there is to it. You have so much more utility in Paint on your computer than this game. You can do this for free on any computer with Paint. Also, you'd probably have more fun painting in real life than this, so there's two much better alternatives than this game. Don't waste your time or money on this.. I'm flabbergasted that this thing even exist on Steam Store, and that they want 2€ for it.

It's a drawing software (not a game,) that's not even one-eighth as good as the worst version of MS Paint.

Horrible and confusing UI, severely lacking functionality and tools, not to mention that the tools replace your cursor with a large icon of the selected tool, making it impossible to do anything with even a hint of precision, even with the paint bucket tool which, by the way, works only in the coloring book mode (which has 3 pictures,) not in your own pictures.

But who needs proper tools when you can stamp an Unity logo on your picture in 14 different colors! (That number alone is ridiculous. Even the Paintbrush from 1990's Windows 3.x, had twice as much.)

Seriously... Just use MS Paint, or any other free image editor, like GIMP, for your (or your child's) doodling. It'll be more fun.. This is a paint application. This is not a game.... well... lets draw? why this is called a game? maybe software? eh... somebody?. Crap.

Dev has to try push this sh!t three times on greenlight. And even on trailer you can see how bad it is.

It's just bad - only 3 pics (and of course "more to come"). Not many options. Misleading arrows (they don't show more options, but change picture). Limited colors. Hard to aim... blurry zoom.

And it's all paid. You can find better "children drawing" things on internet for free.... Coloring 3 pictures for 2 dollars, like seriously WTF !!! Install Paint rather than buying this garbage. The developers even didnt bother to add more pics. Dont buy it !!!!!!!!. You can\u00b4t save the pix and u can\u00b4t close the game without crashing. there is escape action.

for free is still to expensive for this crap.. well... lets draw? why this is called a game? maybe software? eh... somebody?

Cons:

It's so bad it doesn't even have a soundtrack/background music :D

It's like the downgraded version of paint that was featured in Window 2000

It's not even a game

. i like this game but there are a few things they could add like pencil for the color white but the game overall was good i recommend this also its great for playing guess what im drawing. I don't know what this is doing here on steam, I know it's not for my age but I expected more than this.

It should be on playstore for android devices.. I'm flabbergasted that this thing even exist on Steam Store, and that they want 2€ for it.

Got this in a bundle... I don't recommend this because there are better free apps than this. Look up Tux Paint for an example.

This is very limited.... maybe for a very young child it would be o.k. but the icons for the different brushes or the paintbucket or oversized and don't represent exactly where it will fill. Only good thing is for kids is that it doesnt have save function which can also be bad and no exit button so have to alt f4 to exit unless I missed it..... My 3 year old loved it . But only has 3 pictures to color
